How to Capture Files

OneClick Video Capture is a predominant video capture. It allows you to capture files from DV capture, TV capture and other devices. All capturing steps are almost the same. In this part, we provide users the use manual about how to operate DV capture!

Step 1. Click DV capture menu button.

Step 2. Click folder buttons to add, rename or delete folder at will.

Step 3.

- Click the start button to start capturing video.
- Click the short frame button to start capturing images

Step 4. Click the command button to select more.

 This step only appears in the **DV capture** mode. Users can click the button to select the command to the video, such as play, stop, freeze, thaw and so on.

Setting Parameters

OneClick Video Capture is designed to be easy to use. At this part, we will offer users the enhanced features of OneClick Video Capture. By dealing with these settings, users can do more with capturing tasks.

PS: Before registration, you can try **OneClick Video Capture** software for limited 12 times.

Learn the settings on these window to do more with video capturing task:

- [Capture Settings](#)
- [Device Settings](#)
- [Settings](#)
- [Motion Detection Settings](#)

Capture Settings

Once clicking the button  , a capture setting window will be pop up. Users can adjust general settings in the window.

→ In General Tab

Auto Shot: After installing audio equipment, users can set proper audio format.

Overlay: Check the **enable overlay** box before adding water mark in the captured video.

Audio Settings: Tick the buttons to enable audio recording and rendering.

Capture Storage Path: Select desired directory to save current files.
The captured video files will be saved to the directory automatically.

Volume and Balance: Adjust volume and balance freely.

Device Settings

Once clicking the  button a device settings window will pop up. You can set video and audio input settings, stream format, device properties, camera control and other settings in the general tab, and TV input type, country code and frequency override in TV Tuner tab.

 TV Tuner tab is effective in the form of TV capture device settings.

→ In General Tab

Video Settings: users can freely adjust video parameter like brightness, contrast, hue, saturation, sharpness, gamma, white bal and gain.

Stream Settings: users can set video format at this part. Such as output size and compression 6 sizes (640*480, 160*120, 176*144, 320*240 and 352*288) can be selected in , but normally 640*480 is the default size.

Device properties: brightness, contrast, saturation, sharpness, and gamma can be adjusted at your will.

Camera property: users can adjust zoom, pan, tilt, roll, exposure, iris, and focus manually or just click the button auto to adjust automatically.

In order to comfort users in maximum, button  is designed for users to preview the settings, and button  is designed to confirm settings.

→ In TV tuner tab

TV input type: users can select the TV input in cable or antenna type.

Frequency override: also can be adjusted in the dialog.

The white frame: at the underside will show the detailed information after click the button start scan.

Settings

Once clicking the button  , a settings window will pop up. Users can set codec tab, shot format, overlay

tab and video effect in the tab.

→ In Codec Tab

Users can select output formats as AVI/MPEG or ASF at will in codec type, tick the button "Compression Mode" to select the compression mode as no compression, on the fly or after capture, then select different video or audio code in AVI/MEPG part, and select different audio format in audio format.

→ In Shot Frame

Users can select a desired file name at the white frame behind the "prefix", set a auto shot frame interval and number of frames to capture each time at the white frame, and tick buttons to select picture type and bitmap format. If those settings bother you, you can just leave it as default parameter

→ In Overlay

At this part, users can add water mark such as images, words or icon on video files in the overlay tab and also adjust the size and position of the water mark by just fill in the suit number.

→ In Video Effect

At this part, users can adjust bright, contrast, saturation and hue manually or just click reset all button to adjust automatically.

Motion Detection Settings

Once clicking the button  , a device settings window will pop up. You can set motion detection settings such as sensitivity and alarm mode in the following window.

→ Sensitivity

Set alarm line by adjusting those numbers.

The result will display on the white frame.

Adjust sensitivity freely.

Alarm delay can also be adjusted by those numbers.

 If you still have some problems, you can click the help button to operate the settings step by step.

→ Alarm Mode

Select several objects at your will to set alarm mode.

Save Picture: Picture format and picture save path can be set in the window.

Send Email: The detailed information about sending email will display in the window.

Play Sound: Customers can test the sound though the selectable path.

Run Program: Customers can select desired program to run parameter.

Record Video: Disk information and video save path can be set in the window.

FTP Upload: Customers can set FTP and the time of uploading a picture.

Write Log: Customers can save log by the log path in the window.
